

Small Business Scenario: FinTech Startup 'SecurePay'

Company Profile: SecurePay is a newly established FinTech startup based in Cape Town, South Africa. They offer a mobile payment application that facilitates secure, instant peer-to-peer (P2P) and consumer-to-business (C2B) transactions. SecurePay aims to provide an accessible and user-friendly platform for digital payments, particularly targeting underserved communities and small businesses.

Key Services:

- * Mobile P2P payments
- * Mobile C2B payments (QR code based)
- * Integration with local banks and mobile network operators
- * Basic transaction history and reporting for users

Technology Stack:

- * Cloud-based infrastructure (AWS/Azure) for application hosting and data storage.
- * Mobile application developed for iOS and Android platforms.
- * API integrations with third-party payment gateways and banking systems.
- * Internal administrative portal for customer support and operations.

Data Processed:

- * Personal Identifiable Information (PII) of users (names, ID numbers, contact details, bank account details).
- * Transaction data (amounts, dates, recipients, merchants).
- * Device information (for security and fraud detection).

Regulatory Environment:

- * South African Reserve Bank (SARB) regulations for payment service providers.
- * Protection of Personal Information Act (POPIA).
- * Financial Intelligence Centre Act (FICA) for anti-money laundering (AML) and counter-terrorist financing (CTF).

Business Objectives (relevant to risk):

- * Achieve rapid user adoption and market share.
- * Maintain high levels of customer trust and data security.
- * Ensure compliance with all relevant financial and data protection regulations.
- * Prevent fraud and financial crime.
- * Ensure continuous availability of payment services.
